

ROSA180 has an expanded 180° field of view for optimum surveillance. ROSA can be used to recognize and deter loitering and features: human detection, autonomous response, vehicle detection, and perimeter intrusion detection, response and alerting. Through continually active analytics, ROSA creates alerts based on the users' needs. An internal countdown timer is then created, and if the identified people or vehicles remain in view of the device beyond the established time, an alarm and alert is activated. Furthermore, an on-duty guard or remote monitoring officer would be notified of the incident and then could visually identify these suspicious individuals. Once identified, the guard could initiate an audio announcement through the ROSA device notifying them that they must leave, or the property would take appropriate further actions.

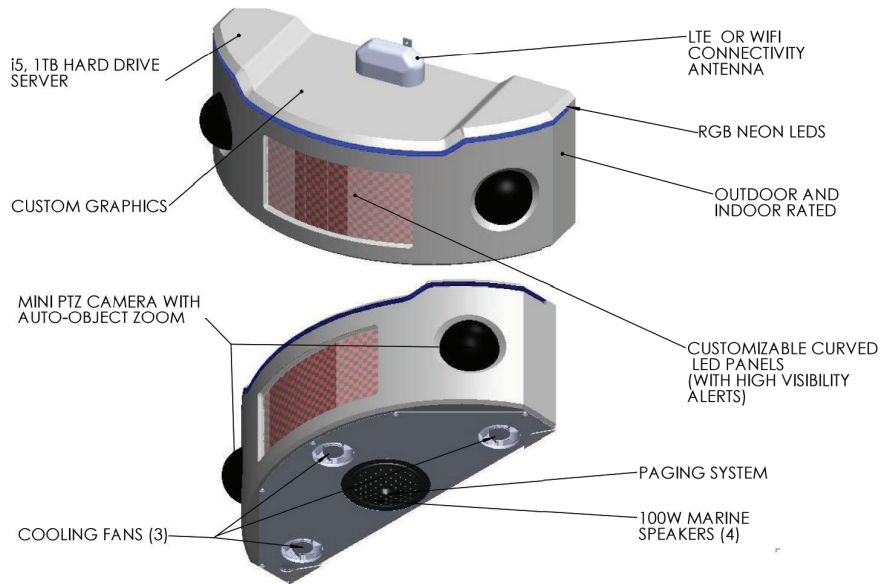

DO YOU HAVE EYES ON YOUR PROPERTY 24/7?

Detection and response built to
your specific needs

ROSA180

Responsive Observation Security Agent with a 180° Field of View

- Human detection, response
- Vehicle detection, response
- Perimeter intrusion detection, response
- Audio intervention
- Live stream to mobile app
- Cellular optimized - no WiFi required
- Cloud served - no hardware
- 20+ days recording of all video
- 1-year event recording in cloud
- Audio talk-down
- Snapshot audit
- License plate recognition
- Neon changing per customer SOPs
- LEDs changing on customer SOPs
- Standard 110v power requirement
- Exclusive face mask detection system
